Update of the Nabisy system

In its [Nabisy Newsletter No. 17](#) dated 5 March 2024, the BLE provided information on numerous changes and additions to the Nabisy system. Most of these affect the area of electricity and heat generation, but some also concern the area of biofuels. Please, read the BLE newsletter carefully! We have highlighted the sections that we consider important for the biofuels sector in colour.

On the occasion of these extensive changes, the BLE offers webinars. The dates and access links are listed in the Nabisy Newsletter on page 7.

At this point, it is important to note that a new CSV file will soon be available on the [BLE homepage](#) for uploading multiple sustainability certificates to Nabisy.

The changes in Nabisy will apply from March 15th 2024.
